

S–C Reconstruction Record

Check one material review conclusion against the completed synthesis finding(s) that support it. Use when the conclusion is consequential, disputed, or useful to document. One record per claim; split claims that rely on different support. This record locates appraisal; it does not perform it.

Review: _____ **Completed by / date:** _____

1 Pair What is the claim, and what supports it?

C Selected conclusion and exact location:

S Smallest sufficient completed synthesis finding(s) and location(s):

Trace C through the review's synthesis question(s). Include scope, qualifications and interpretation already produced by the synthesis.

Another plausible S–C pairing that changes the answer? ☐ No ☐ Yes: use a separate record for that pair.

2 Compare What does C require beyond S?

Accept S, including its qualifications. What substantive part of C, if any, remains open? Ignore wording differences alone.

☐ Nothing remains open. C adds no claim. Go to Step 4. If the claim itself is disputed, note its first entry in Step 3.

☐ Something remains open. State only the smallest extra claim, leaving out what S already establishes:

3 Locate Where does the claim belong?

Extra or disputed claim: _____

First entered at (exact review location): ☐ Synthesis ☐ Conclusion ☐ Earlier: _____

Evidence, reasoning or established method responsible for appraisal:

Appraisal: ☐ Already done at relevant scope ☐ Needs checking ☐ Unclear

If the disputed claim entered before C, examine it there. Editing C alone does not resolve the earlier inference.

4 Decide What happens to this C?

☐ Retain / stop: C carries forward what S and prior appraisal establish.

☐ Retain and clarify basis: a supported addition needs its basis stated.

☐ Narrow or revise: support warrants a weaker or more qualified C.

☐ Separate: a distinct implication or interpretation needs its own basis.

Reason: S establishes _____; C [carries/adds] _____; appraisal belongs _____; therefore _____.

What remains uncertain, including selection of S? _____
